Contents

1 Introduction

This document explains how to develop new clustering algorithms using the jClustering API. If you just want to use this software, please refer to the user manual (`https://github.com/HGGM-LIM/jclustering/blob/master/doc/user_manual.pdf?raw=true`).

Starting from version 1.2.4, the latest API documentation is attached to each release. Please download that copy of the documentation as it is the most useful resource for developers, apart from this guide.
